

Quality Care for All

Partners in our mission to improve systems of care both benefit from it and contribute to it.

Our comprehensive approach means patients get tangible life-saving results at every stage of the healthcare journey.

The science is clear - patient outcomes improve when healthcare providers and hospitals follow data-driven processes and procedures that **lead the development, management and implementation of high-quality care.**

But keeping up with and creating system-wide strategies to track and apply the ideal guidelines-based processes is challenging.

Backed by our gold standard science the American Heart Association's comprehensive portfolio of education

and quality programs reflects **our fierce commitment to saving all lives around the world.**

The AHA quality improvement systems **embed guidelines-based care into daily practice** while creating a safe environment for healthcare professionals, and the systems they work within, to seek constant improvement. From this effort, the AHA's hospital certification program recognizes those organizations that are **leading the way in patient care for key cardiovascular and stroke conditions.**

Enabling Improved Systems of Care

American Heart Association.
Get With The Guidelines®

Apply the most up-to-date evidence-based treatment guidelines for improved patient outcomes. This is the database leader with over 11 million patient records for a robust benchmark of aggregated data. Data collection allows efficient abstraction, analysis and reporting. Run real time reports to see how a hospital compares regionally, nationally and globally.

Stroke Center Certification

A framework to structure, manage and deliver high quality patient care following evidence-based practices to create an integrated and collaborative approach to stroke care. Offering two levels of certification, Primary Stroke Center and Comprehensive Stroke Center.

Chest Pain Center Certification

Following evidence-based practices and a framework to structure manage and deliver high quality patient care to create an integrated and collaborative approach to cardiovascular care. Two levels of certification available, Primary Chest Pain Center and Comprehensive Chest Pain Center.

Heart Failure A.S.I.A.

Working to improve in-hospital quality of care for heart failure patients in seven Asian countries: Indonesia, Malaysia, the Philippines, Singapore, Taiwan, Thailand and Vietnam. This three-year program is powered by Get With The Guidelines®.

Low-dose, high-frequency digital resuscitation training with the most up-to-date evidence treatment guidelines provides a complete and robust solution for resuscitation excellence. Linking science, skills and analytics to ensure verified competence.

The American Heart Association is providing answers to real world issues faced by healthcare organizations.
